Children and COVID-19: State Data Report

A joint report from the American Academy of Pediatrics and the Children’s Hospital Association

Summary of publicly reported data from 49 states, NYC, DC, PR, and GU

Version: 3/17/22

Note: Data Limitations. The numbers in this report represent cumulative counts since states began reporting. The data are based on how public agencies collect, categorize and post information. All data reported by state/local health departments are preliminary and subject to change and reporting may change over time. Notably, in the summer of 2021 and winter of 2022, some states have revised cases counts previously reported, begun reporting less frequently, or dropped metrics previously reported. For example, due to several changes on their dashboards and the data currently available, AL, TX, HI, DC and MS data in this report are not current (cumulative data through 7/29/21, 8/26/21, 1/13/22, 3/3/22, and 3/10/22 respectively). Readers should consider these factors. States may have additional information on their web sites.

Changes in testing and how states report might affect week to week comparisons. The extremely high volume of cases during the Omicron surge followed by the sharp decline in cases may have created discontinuities in state reports week to week. Shortages of COVID-19 tests during surges and the use of COVID-19 home tests likely affect the undercounting of COVID-19 cases. During holiday weeks states may change their reporting schedules which may cause irregularities in trends. At times when COVID-19 transmission is low, states might reduce the frequency information is updated.

On 2/17/22, TX released new data that is NOT included in cumulative case counts or figures but located here and in Appendix 3B of this report (1,090,744 cumulative child cases as of 2/17/22); TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754).
COVID-19: Available Data for Children

- State-level reports are the best publicly available data on COVID-19 cases in children

- Starting in June 2021, some states reported less frequently and dropped metrics previously reported as overall cases decreased

- This report summarizes what was available on 3/17/22

- **49 states, NYC, DC, Puerto Rico and Guam** provided age distributions of reported COVID-19 cases
  - 25 states and NYC provided age distribution of hospitalizations
  - 46 states, NYC, PR and Guam provided age distribution of deaths

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU
Analysis by American Academy of Pediatrics and Children’s Hospital Association
All data reported by state/local health departments are preliminary and subject to change
# Children and COVID-19: Data Limitations

## General Limitations
- Format, content, and metrics of reported COVID-19 data differed substantially by state.
- Definition of "child": Age ranges reported for children varied by state (0-14, 0-17, 0-18, 0-19, and 0-20 years; see Fig 1B).
- Unknown: Number of children infected but not tested and confirmed.

## State-Level Changes
- TX: Age distribution reported for only 2% of confirmed cases (99,989/5,464,091) resulting in an undercount of child cases; TX cumulative cases through 8/26/21. As of 1/14/22, TX released new data that is NOT included in cumulative case counts or figures but located here and in Appendix 3B of this report.
- NY: Did not provide age distribution for state-wide cases (NYC only).
- AL: As of 8/13/20, changed definition of child case from 0-24 to 0-17 years; as of 9/17/20, provided age distribution for confirmed cases only; as of 8/5/21, due to change in data available, AL cumulative cases and deaths through 7/29/21.
- HI: As of 8/27/20, changed definition of child case from 0-19 to 0-17 years; As of 1/20/22, due to change in available data, HI cumulative cases, hospitalizations, and deaths through 1/13/22.
- MA: As of 9/3/20, revised definition of probable case, leading to a reduction in total case count, and changed reporting from total child cases to cases added in last two weeks.
- RI: As of 9/10/20, changed definition of child case from 0-19 to 0-18 years.
- MO: As of 10/1/20, changed definition of child cases from 0-19 to 0-17 years.
- PR: As of 3/11/21, due to a change in data available, a calculation was required to obtain confirmed and probable child case totals, leading to a reduction in total child case count.
- AK: On 6/17/21, did not report child hospitalizations or child deaths.
- FL: As of 6/24/21, stopped reporting child hospitalizations; due to change in data available, calculation required to obtain child cases for 0-14 years.
- WV: As of 8/12/21, WV changed definition of child case from 0-19 to 0-20 years.
- WA: As of 1/13/22, due to a change in data available, WA cumulative hospitalizations and deaths through 1/6/22; As of 3/10/22, changed definition of child case from 0-19 to 0-17.
- IA: As of 2/17/22, due to a change in available data, IA cumulative deaths through 2/10/22.
- DC: As of 3/10/22, due to change in available data, DC cumulative cases and deaths through 3/3/22.
- MS: As of 3/17/22, due to change in available data, MS cumulative cases, hospitalizations, and deaths through 3/10/22.

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU; Analysis by American Academy of Pediatrics and Children’s Hospital Association; All data reported by state/local health departments are preliminary and subject to change.
Children and COVID-19: 3/17/22
Summary of State-Level Data Provided in this Report

Detail and links to state/local data sources provided in Appendix

Cumulative Number of Child COVID-19 Cases*
- 12,784,627 total child COVID-19 cases reported, and children represented 19.0% (12,784,627/67,233,212) of all cases
- Overall rate: 16,986 cases per 100,000 children in the population

Change in Child COVID-19 Cases*
- 31,991 child COVID-19 cases were reported the past week from 3/10/22-3/17/22 (12,752,636 to 12,784,627) and children represented 18.3% (31,991/174,854) of the weekly reported cases
- Over two weeks, 3/3/22-3/17/22, there was a <1% increase in the cumulated number of child COVID-19 cases (73,621 cases added (12,711,006 to 12,784,627))

Cumulative Hospitalizations (25 states and NYC reported)*
- Among states reporting, children ranged from 1.3%-4.6% of their total cumulated hospitalizations, and 0.1%-1.5% of all their child COVID-19 cases resulted in hospitalization

Cumulative Mortality (46 states, NYC, PR and GU reported)*
- Among states reporting, children were 0.00%-0.27% of all COVID-19 deaths, and 3 states reported zero child deaths
- In states reporting, 0.00%-0.01% of all child COVID-19 cases resulted in death

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU; Analysis by American Academy of Pediatrics and Children’s Hospital Association

* Note: Data Limitations. The numbers in this report represent cumulative counts since states began reporting. The data are based on how public agencies collect, categorize and post information. All data reported by state/local health departments are preliminary and subject to change and reporting may change over time. Notably, in the summer of 2021 and winter of 2022, some states have revised cases counts previously reported, begun reporting less frequently, or dropped metrics previously reported. For example, due to several changes on their dashboards and the data currently available, AL, TX, HI, DC and MS data in this report are not current (cumulative data through 7/29/21, 8/26/21, 1/13/22, 3/3/22, and 3/10/22 respectively). Readers should consider these factors. States may have additional information on their web sites.

Changes in testing and how states report might affect week to week comparisons. The extremely high volume of cases during the Omicron surge followed by the sharp decline in cases may have created discontinuities in state reports week to week. Shortages of COVID-19 tests during surges and the use of COVID-19 home tests likely affect the undercounting of COVID-19 cases. During holiday weeks states may change their reporting schedules which may cause irregularities in trends.

On 2/17/22, TX released new data that is NOT included in cumulative case counts or figures but located here and in Appendix 3B of this report (1,090,744 cumulative child cases as of 2/17/22); TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754).
Fig 2. Cumulative Number of Child COVID-19 Cases: 3/17/22

- 12,784,627 total child COVID-19 cases (cumulative)
- Nine states reported 400,000+ child cases
- Three states reported fewer than 30,000 child cases

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)

All data reported by state/local health departments are preliminary and subject to change
Analysis by American Academy of Pediatrics and Children's Hospital Association
Due to available data and changes made to dashboard, AL cumulative cases through 7/29/21
Due to available data, HI cumulative child cases and cumulative cases for all ages through 1/13/22
Due to available data, DC cumulative child cases and total cases through 3/3/22
Due to available data, MS cumulative child and total cases through 3/10/22
Children represented 19.0% (12,784,627/67,233,212) of all available cases.

Fourteen states reported 22% or more of cumulated cases were children.

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)
All data reported by state/local health departments are preliminary and subject to change
Analysis by American Academy of Pediatrics and Children’s Hospital Association
Due to available data and changes made to dashboard, AL cumulative cases through 7/29/21
Due to available data, HI cumulative child cases and cumulative cases for all ages through 1/13/22
Due to available data, DC cumulative child cases and total cases through 3/3/22
Due to available data, MS cumulative child and total cases through 3/10/22
Calculated using state-level population estimates from US Census Bureau (2019)*

- Overall rate: 16,986 child COVID-19 cases per 100,000 children in the population
- Fourteen states reported more than 22,000 cases per 100,000 children

Fig 4. Cumulative COVID-19 Cases per 100,000 Children: 3/17/22

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)
All data reported by state/local health departments are preliminary and subject to change
Analysis by American Academy of Pediatrics and Children's Hospital Association
Due to available data and changes made to dashboard, AL cumulative cases through 7/29/21
Due to available data, HI cumulative child cases and cumulative cases for all ages through 1/13/22
Due to available data, DC cumulative child cases and total cases through 3/3/22
Due to available data, MS cumulative child and total cases through 3/10/22
Fig 5. Cumulative Child COVID-19 Cases and Percent Increase in Child Cases

A. Cumulative Child COVID-19 Cases, 3/17/22
9 states with 400,000+ cumulative child cases

B. Percent Increase in Child Cases, 3/3/22-3/17/22
From 3/3-3/17, there were 73,621 child cases added (12,711,006 to 12,784,627; <1% increase)

See detail in Appendix: Data from 48 states, NYC, DC, and PR (TX excluded from figures)
All data reported by state/local health departments are preliminary and subject to change. Analysis by American Academy of Pediatrics and Children’s Hospital Association
Due to available data and changes made to dashboard, AL cumulative cases through 7/29/21
Due to available data, HI cumulative child cases and cumulative cases for all ages through 1/13/22
Due to available data and calculations required to obtain MA child cases, weekly estimates fluctuate
Due to available data, DC cumulative child cases and total cases through 3/3/22
Due to available data, MS cumulative child and total cases through 3/10/22
On 3/17/22, due to available data for NV, there were 571 fewer cumulative child cases
As of 3/10/22, WA changed definition of child case from 0-19 to 0-17
Fig 6. United States: Number of Child COVID-19 Cases Added in Past Week*

* Note: 6 states changed their definition of child cases: AL as of 8/13/20, HI as of 8/27/20, RI as of 9/10/20, MO as of 10/1/20, WV as of 8/12/21, WA as of 3/10/22
On 2/17/22, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report (1,090,744 cumulative child cases as of 2/17/22); TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754)
Due to available data and changes made to dashboard, AL cumulative cases through 7/29/21
Due to available data, HI cumulative child cases and cumulative cases for all ages through 1/13/22
Due to available data and calculations required to obtain MA child cases, weekly estimates fluctuate
Due to available data, DC cumulative child cases and total cases through 3/3/22
Due to available data, MS cumulative child and total cases through 3/10/22
On 3/17/22, due to available data for NV, there were 571 fewer cumulative child cases
See detail in Appendix: Data from 49 states, NYC, DC, PR and GU
All data reported by state/local health departments are preliminary and subject to change; Analysis by American Academy of Pediatrics and Children’s Hospital Association
Fig 7. United States: Child COVID-19 Cases Added in Past Week, by Region*

* Note: Regions are the US Census Regions

- 6 states changed their definition of child cases: AL as of 8/13/20, HI as of 8/27/20, RI as of 9/10/20, MO as of 10/1/20, WV as of 8/12/21, WA as of 3/10/22
- On 2/17/22, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report (1,090,744 cumulative child cases as of 2/17/22); TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754)
- Due to available data and changes made to dashboard, AL cumulative cases through 7/29/21
- Due to available data, HI cumulative child cases and cumulative cases for all ages through 1/13/22
- Due to available data and calculations required to obtain MA child cases, weekly estimates fluctuate
- Due to available data, DC cumulative child cases and total cases through 3/3/22
- Due to available data, MS cumulative child and total cases through 3/10/22
- On 3/17/22, due to available data for NV, there were 571 fewer cumulative child cases

See detail in Appendix: Data from 49 states, NYC, DC, PR and GU

All data reported by state/local health departments are preliminary and subject to change; Analysis by American Academy of Pediatrics and Children’s Hospital Association
Fig 8. United States: Number of COVID-19 Cases Added in Past Week for Children and Adults*

* Note: 6 states changed their definition of child cases: AL as of 8/13/20, HI as of 8/27/20, RI as of 9/10/20, MO as of 10/1/20, WV as of 8/12/21, WA as of 3/10/22
On 2/17/22, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report (1,090,744 cumulative child cases as of 2/17/22);
TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754)
Due to available data and changes made to dashboard, AL cumulative cases through 7/29/21
Due to available data, HI cumulative child cases and cumulative cases for all ages through 1/13/22

* Note: Data represent cumulative counts since states began reporting; All data reported by state/local health departments are preliminary and subject to change

\* Unknown: number of children infected but not tested and confirmed

\& As of 3/17/22, MS cumulative cases through 3/10/22

\# As of 3/17/22, due to available NV data and calculation required to obtain child total cases, there is a downward revision of cumulative child cases

\& As of several weeks in 2022 (1/27 and 2/17), due to available data and calculations required to obtain child cases, there is a downward revision of cumulative child cases for MA; On 3/10/22, due to available data and calculations required, cumulative child cases through 3/3/22

\* As of 1/20/22 and 2/22, DC cumulative child cases through 1/13/22; On 2/10/22, DC cumulative child cases through 2/3/22; On 2/24/22, DC cumulative child cases through 2/17/22; As of 3/10/22, DC cumulative cases through 3/3/22

\& As of 3/10/22, WA changed definition of child case from 0-19 to 0-17

\& As of 3/3/22, due to available data, SC revised case data resulting in a downward revision of cumulative child cases

\& As of 2/22, NE cases by age are again available and included for 6/24/21 through 2/22, resulting in an increase of 53,069 child cases and 220,489 total cases

\& As of 2/3/22, IA cumulative cases by age are again available and included for 6/24/21 through 2/22, resulting in an increase of 53,069 child cases and 220,489 total cases

\& As of 1/20/22, TX released new data that is NOT included in cumulative case counts or figures but located in Appendix 3B of this report (774,083 cumulative child cases)

\& As of 1/6/22 and 1/13/22, due to available data, OK cumulative child cases through 12/30/21

\& As of 1/6/22, due to available data, GU cumulative child cases through 12/30/21

\& As of 12/16/21 & 12/23/21, due to available data, MD child cases through 12/9/21; On 12/30/21, due to lag in reporting, MD experienced a very large increase in child cases (eg, 30,764 cases added)

\& As of 12/9/21, due to available data, RI cumulative cases through 12/22/21; On 12/16/21, due to lag in reporting, RI experienced a large increase in child cases (eg, 3,285 cases added)

For additional information on US child hospitalizations from the CDC, visit https://covid.cdc.gov/covid-data-tracker/#new-hospital-admissions

[^] Hospitalization rate = number of child hospitalizations / number of child cases

For several weeks in 2021 & 2022 (11/25/21, 12/2/21, 12/16/21, 1/20/22, 2/10/22, 2/17/22, & 3/2/22) VA revised hospitalization data resulting in a downward revision of cumulative child hospitalizations and cumulative hospitalizations for all ages; On 2/24/22, due to data available, VA cumulative hospitalizations through 2/17/22

On 3/3/22, due to available data, AZ revised hospitalization data resulting in a downward revision of cumulative child hospitalizations and cumulative hospitalizations for all ages

As of 2/10/22, ND began reporting hospitalizations by age

As of 12/9/21, due to available data, RI cumulative hospitalizations through 12/2/21; On 12/16/21, due to lag in reporting RI reported large increase of hospitalizations;

On 12/23/21, RI revised hospitalization data resulting in a downward revision of cumulative child hospitalizations and cumulative hospitalizations for all ages; On 2/10/22, RI revised hospitalization data resulting in a downward revision of cumulative child hospitalizations

As of 1/20/22, WI revised hospitalization data resulting in a downward revision of cumulative child hospitalizations

As of 1/13/22, due to available data and changes made to dashboard, WA cumulative child hospitalizations and cumulative hospitalizations for all ages through 1/6/22

On 12/16/21 and 12/30/21, CO revised hospitalization data, resulting in a downward revision of cumulative child hospitalizations

On 12/30/21, NJ revised hospitalization data, resulting in a downward revision of cumulative hospitalizations for all ages

Due to the Thanksgiving holiday, most data included for 11/25/21 were posted by States on 11/24/21

* Note: Data represent cumulative counts since states began reporting; All data reported by state/local health departments are preliminary and subject to change; * Number of child deaths / number of child cases

○ As of 2/3/22, NE mortality data by age are again available and included for 6/24/21 through 2/3/22
± As of 8/26/21, NM began reporting mortality data by age; due to only available data, NM is excluded from mortality data percentages
× As of 8/19/21, SC began reporting mortality data by age
# As of 7/30/20, Texas provided age distribution for all COVID-19-associated deaths; Texas reported age for only 2% of total confirmed cases; As of 1/14/21, TX released new data that is only updated monthly; TX cumulative deaths through 2/3/22
% As of 8/19/21, SC began reporting mortality data by age

Percent of child cases resulting in death omitted for Texas; Data for Texas in this report is limited to the case count for which age is provided

* As of 1/13/22, due to available data and changes made to dashboard, WA cumulative child deaths and cumulative deaths for all ages through 1/8/22
Frequently Asked Questions

Q: Why are the AAP and CHA collecting this data?
A: Our goal is to provide a weekly snapshot of how COVID-19 is affecting children in the United States. CDC provides a national number of cases by age on its COVID-19 data tracker, but there are no geographic indicators provided and the age data are not released on a regular schedule. Our data collection method allows for tracking the number of child cases weekly, as well as providing publicly reported case numbers for children at the state level.

Q: The age ranges for children in the report are broad – why were these age ranges chosen and are data available for more specific age ranges of children?
A: Each state makes different decisions about how to report the age distribution of COVID-19 cases, and as a result the age range for reported cases varies by state. For the purposes of this report it is not possible to standardize more detailed age ranges for children based on what is publicly available from the states at this time. Please refer to specific state health department websites of interest to see if the state provides more granular detail of cases by age (see report Appendix for links to all state data sources).

Q: What is the definition of a COVID-19 case?
A: COVID-19 cases are defined as persons who have been identified as a confirmed (via a diagnostic molecular test) or probable (via a clinical diagnosis) case. COVID-19 cases are reported by the states, following reporting standards established by the CDC. For more information on the definitions of confirmed and probable cases, see the following resources: COVID Tracking Project: Definitions; CDC, COVID-19 Data and Surveillance.

Q: Why are only a small portion (<5%) of child COVID-19 cases included for Texas?
A: Texas Department of State Health Services reports overall confirmed cases but only a small fraction are included in the age distribution. As of 1/14/22, TX released new data that is NOT included in cumulative case counts or figures but located here and in Appendix 3B of this report. Other sources for child COVID-19 cases can be found here: Texas Public Schools COVID-19 Data

Q: Why does the report not provide the percent of child cases that were symptomatic vs. asymptomatic or that had underlying conditions?
A: For the report, we are limited to the data that states are making publicly available. At this time, states are not providing data related to symptoms or underlying conditions and age. CDC provides some information on COVID-19 hospitalizations by age on the CDC COVID-NET dashboard.

Q: For the child population for each state, does that match the listed age range for the state’s child COVID-19 data?
A: Yes, the report uses child population numbers that match on directly with the listed age range for children provided by each state. State population numbers were obtained from the US Census Bureau.

Q: The report provides “cumulative totals” for cases, tests, hospitalizations, and deaths for available states. Are those the total numbers since the states began reporting, or since the AAP and CHA started collecting this data?
A: All “cumulative total” data represent cumulative counts since states began reporting COVID-19 data.

Q: How can I learn more about COVID-19 cases in my state?
A: Links to all state data sources are provided in the Appendix.

Q: Are these data final?
A: No. All data reported by state/local health departments included in this report are preliminary and subject to change and revision as health departments gather more information.

Q: Is this the most recent report available? When will a new report be released?
A: The most recent version of the report is available for download on the AAP website. New reports are made available on a weekly basis at aap.org/CovidStateData.
Additional Resources

• For more information about COVID-19 data in your area, we encourage you to reach out to your state and local health department officials

• Visit the [AAP Critical Updates](#) site for daily updates, resources, and guidance on COVID-19 and pediatrics
