Children and COVID-19: State Data Report

A joint report from the American Academy of Pediatrics and the Children’s Hospital Association

Summary of publicly reported data from 49 states, NYC, DC, PR, and GU

Version: 3/25/21
COVID-19: Available Data for Children

- State-level reports are the best publicly available data on COVID-19 cases in children
- This report summarizes what was available on 3/25/21
- **49 states, NYC, DC, Puerto Rico and Guam** provided age distributions of reported COVID-19 cases
  - 11 states provided age distribution of testing
  - 24 states and NYC provided age distribution of hospitalizations
  - 43 states, NYC, PR and Guam provided age distribution of deaths

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU
Analysis by American Academy of Pediatrics and Children’s Hospital Association
All data reported by state/local health departments are preliminary and subject to change

Fig 1A: States Reporting Age Distribution of COVID-19 Cases as of 3/25/21

- Yes: Reported age distribution of cases
- TX: Reported age distribution for only 3% of cases
- NY: Only NYC reported age distribution of cases
- MA: Only reported age distribution of cases added in past 2 weeks
Children and COVID-19: Data Limitations

General Limitations

- Format, content, and metrics of reported COVID-19 data differed substantially by state
- Definition of “child”: Age ranges reported for children varied by state (0-14, 0-17, 0-18, 0-19, and 0-20 years; see Fig 1B)
- Unknown: Number of children infected but not tested and confirmed

State-Level Limitations

- TX: Age distribution reported for only 3% of confirmed cases (76,359/2,374,938), resulting in an undercount of child cases; TX is excluded from some figures
- NY: Did not provide age distribution for state-wide cases (NYC only)
- AL: As of 8/13/20, changed definition of child case from 0-24 to 0-17 years; as of 9/17/20, provided age distribution for confirmed cases only
- HI: As of 8/27/20, changed definition of child case from 0-19 to 0-17 years
- MA: As of 9/3/20, revised definition of probable case, leading to a reduction in total case count; reported age distribution of cases added in last two weeks but not for total cases to date
- RI: As of 9/10/20, changed definition of child case from 0-19 to 0-18 years
- MO: As of 10/1/20, changed definition of child cases from 0-19 to 0-17 years
- PR: As of 3/11/21, due to a change in data available, a calculation was required to obtain confirmed and probable child case totals, leading to a reduction in total child case count

Fig 1B: Child Age Ranges of COVID-19 Cases Reported by States as of 3/25/21

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU; Analysis by American Academy of Pediatrics and Children's Hospital Association; All data reported by state/local health departments are preliminary and subject to change
Children and COVID-19: 3/25/21
Summary of State-Level Data Provided in this Report

Detail and links to state/local data sources provided in Appendix

Cumulative Number of Child COVID-19 Cases*
• 3,405,638 total child COVID-19 cases reported, and children represented 13.4% (3,405,638/25,446,361) of all cases
• Overall rate: 4,525 cases per 100,000 children in the population

Change in Child COVID-19 Cases*
• 64,029 new child COVID-19 cases were reported the past week from 3/18/21-3/25/21 (3,341,608 to 3,405,638) and children represented 19.2% (64,029/335,349) of the new weekly cases
• Over two weeks, 3/11/21-3/25/21, there was a 4% increase in the cumulated number of child COVID-19 cases (121,107 new cases (3,284,531 to 3,405,638))

Testing (11 states reported)*
• Children made up between 6.0%-18.7% of total state tests, and between 5.3%-31.5% of children tested were tested positive

Hospitalizations (24 states and NYC reported)*
• Children were 1.3%-3.1% of total reported hospitalizations, and between 0.1%-2.1% of all child COVID-19 cases resulted in hospitalization

Mortality (43 states, NYC, PR and GU reported)*
• Children were 0.00%-0.19% of all COVID-19 deaths, and 10 states reported zero child deaths
• In states reporting, 0.00%-0.03% of all child COVID-19 cases resulted in death

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU; Analysis by American Academy of Pediatrics and Children’s Hospital Association

* Note: Data represent cumulative counts since states began reporting; All data reported by state/local health departments are preliminary and subject to change
Fig 2. Cumulative Number of Child COVID-19 Cases: 3/25/21

- 3,405,638 total child COVID-19 cases (cumulative)
- Eleven states reported 100,000+ child cases
- Five states reported fewer than 10,000 child cases

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)
All data reported by state/local health departments are preliminary and subject to change
Analysis by American Academy of Pediatrics and Children’s Hospital Association
Fig 3. Percent of Cumulative COVID-19 Cases that were Children: 3/25/21

- Children represented 13.4% (3,405,638/25,446,361) of all available cases
- Five states reported 18% or more of cases were children

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)
All data reported by state/local health departments are preliminary and subject to change
Analysis by American Academy of Pediatrics and Children's Hospital Association
Fig 4. Cumulative COVID-19 Cases per 100,000 Children: 3/25/21

- Calculated using state-level population estimates from US Census Bureau (2019)*

- Overall rate: 4,525 child COVID-19 cases per 100,000 children in the population

- Seven states reported more than 7,000 cases per 100,000

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)
All data reported by state/local health departments are preliminary and subject to change
Analysis by American Academy of Pediatrics and Children's Hospital Association
Fig 5. Cumulative Child COVID-19 Cases and Percent Increase in Child Cases

A. Cumulative Child COVID-19 Cases, 3/25/21
11 states with 100,000+ cumulative child cases

B. Percent Increase in Child Cases, 3/11/21-3/25/21
From 3/11-3/25, there were 121,107 new child cases reported (3,284,531 to 3,405,638; 4% increase)

See detail in Appendix: Data from 48 states, NYC, DC, and PR (TX excluded from figures);
All data reported by state/local health departments are preliminary and subject to change; Analysis by American Academy of Pediatrics and Children’s Hospital Association
Fig 6. United States: Number of Child COVID-19 Cases Added in Past Week*

* Note: 4 states changed their definition of child cases: AL as of 8/13/20, HI as of 8/27/20, RI as of 9/10/20, MO as of 10/1/20; TX reported age for only a small proportion of total cases each week (eg, 3-20%)

See detail in Appendix: Data from 48 states, NYC, DC, and PR

All data reported by state/local health departments are preliminary and subject to change; Analysis by American Academy of Pediatrics and Children’s Hospital Association
Fig 7. United States: Number of COVID-19 Cases Added in Past Week for Children and Adults*

* Note: 4 states changed their definition of child cases: AL as of 8/13/20, HI as of 8/27/20, RI as of 9/10/20, MO as of 10/1/20; TX reported age for only a small proportion of total cases each week (eg, 3-20%)

See detail in Appendix: Data from 48 states, NYC, DC, and PR

All data reported by state/local health departments are preliminary and subject to change; Analysis by American Academy of Pediatrics and Children's Hospital Association

* Note: Data represent cumulative counts since states began reporting; All data reported by state/local health departments are preliminary and subject to change; ^ Number of child deaths / number of child cases; ~ As of 3/4/21, OH revised mortality data, resulting in a downward revision of cumulative deaths for all ages; # As of 7/30/20, Texas provided age distribution for all COVID-19-associated deaths; Texas reported age for only 3% of total confirmed cases; Percent of child cases resulting in death omitted for Texas; □ As of 3/25/21, VA revised mortality data, resulting in a downward revision of cumulative deaths for all ages; Data for Texas in this report is limited to the case count for which age is provided.
Frequently Asked Questions

Q: Why are the AAP and CHA collecting this data?
A: Our goal is to provide a weekly snapshot of how COVID-19 is affecting children in the United States. CDC provides a national number of cases by age on its COVID-19 data tracker, but there are no geographic indicators provided and the age data are not released on a regular schedule. Our data collection method allows for tracking the number of child cases weekly, as well as providing publicly reported case numbers for children at the state level.

Q: The age ranges for children in the report are broad – why were these age ranges chosen and are data available for more specific age ranges of children?
A: Each state makes different decisions about how to report the age distribution of COVID-19 cases, and as a result the age range for reported cases varies by state. For the purposes of this report it is not possible to standardize more detailed age ranges for children based on what is publicly available from the states at this time. Please refer to specific state health department websites of interest to see if the state provides more granular detail of cases by age (see report Appendix for links to all state data sources).

Q: What is the definition of a COVID-19 case?
A: COVID-19 cases are defined as persons who have been identified as a confirmed (via a diagnostic molecular test) or probable (via a clinical diagnosis) case. COVID-19 cases are reported by the states, following reporting standards established by the CDC. For more information on the definitions of confirmed and probable cases, see the following resources: COVID Tracking Project: Definitions; CDC, COVID-19 Data and Surveillance.

Q: Why are only a small portion (<5%) of child COVID-19 cases included for Texas?
A: Texas Department of State Health Services reports overall confirmed cases but only a small fraction are included in the age distribution. Other sources for child COVID-19 cases are not included in the report but outline much higher numbers (eg, Texas Public Schools COVID-19 Data).

Q: Why does the report not provide the percent of child cases that were symptomatic vs. asymptomatic or that had underlying conditions?
A: For the report, we are limited to the data that states are making publicly available. At this time, states are not providing data related to symptoms or underlying conditions and age. CDC provides some information on COVID-19 hospitalizations by age on the CDC COVID-NET dashboard.

Q: For the child population for each state, does that match the listed age range for the state’s child COVID-19 data?
A: Yes, the report uses child population numbers that match on directly with the listed age range for children provided by each state. State population numbers were obtained from the US Census Bureau.

Q: The report provides “cumulative totals” for cases, tests, hospitalizations, and deaths for available states. Are those the total numbers since the states began reporting, or since the AAP and CHA started collecting this data?
A: All “cumulative total” data represent cumulative counts since states began reporting COVID-19 data.

Q: How can I learn more about COVID-19 cases in my state?
A: Links to all state data sources are provided in the Appendix.

Q: Are these data final?
A: No. All data reported by state/local health departments included in this report are preliminary and subject to change and revision as health departments gather more information.

Q: Is this the most recent report available? When will a new report be released?
A: The most recent version of the report is available for download on the AAP website. New reports are made available on a weekly basis at aap.org/CovidStateData.
Additional Resources

- For more information about COVID-19 data in your area, we encourage you to reach out to your state and local health department officials.

- Visit the [AAP Critical Updates](#) site for daily updates, resources, and guidance on COVID-19 and pediatrics.

- For COVID-19 articles for parents in English and Spanish, visit [HealthyChildren.org](http://HealthyChildren.org), the parenting website of the AAP.
