

Children and COVID-19: State Data Report

A joint report from the American Academy of Pediatrics and the Children's Hospital Association
Summary of publicly reported data from 49 states, NYC, DC, PR, and GU

Version: 6/2/22

Note: Data Limitations. The numbers in this report represent cumulative counts since states began reporting. The data are based on how public agencies collect, categorize and post information. All data reported by state/local health departments are preliminary and subject to change and reporting may change over time. Notably, in the summer of 2021 and winter of 2022, some states have revised cases counts previously reported, begun reporting less frequently, or dropped metrics previously reported. For example, due to several changes on their dashboards and the data currently available, AL, TX, HI, DC, MS, SC, and NE data in this report are not current (cumulative data through 7/29/21, 8/26/21, 1/13/22, 3/3/22, 3/10/22, 4/28/22, and 5/12/22 respectively). Additionally, as of 3/17/22, available FL case and death data updated only every other week. Readers should consider these factors. States may have additional information on their web sites.

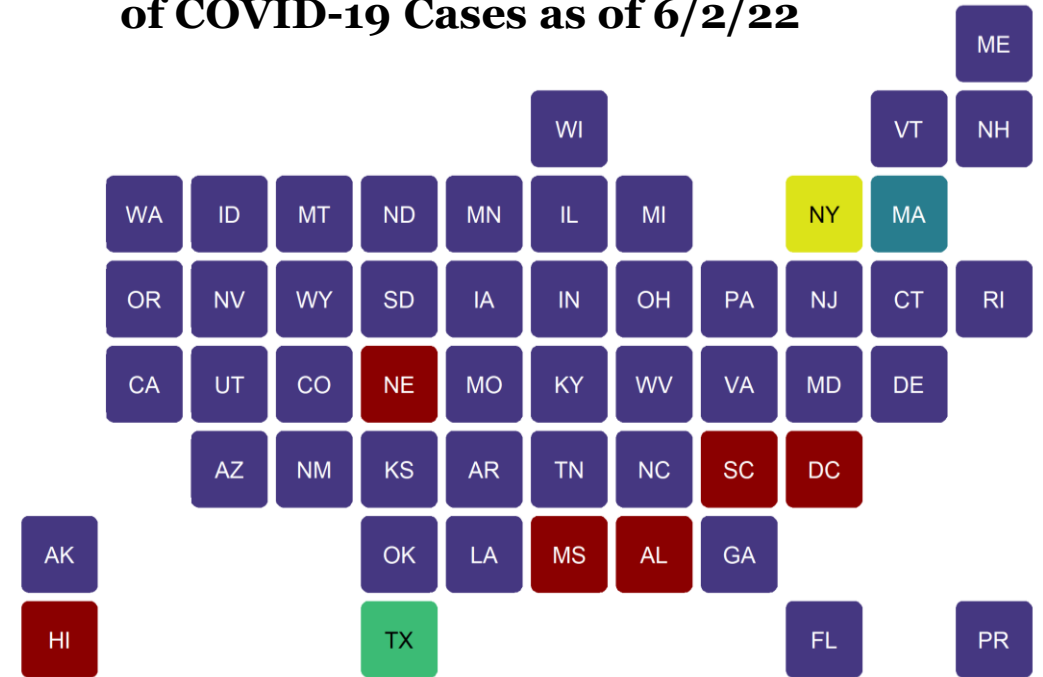

Changes in testing and how states report might affect week to week comparisons. The extremely high volume of cases during the Omicron surge followed by the sharp decline in cases may have created discontinuities in state reports week to week. Shortages of COVID-19 tests during surges and the increasing use of COVID-19 home tests likely affect the undercounting of COVID-19 cases. During holiday weeks states may change their reporting schedules which may cause irregularities in trends. At times when COVID-19 transmission is low, states might reduce the frequency information is updated. Beginning in March 2022, several states shifted to updating data one to two times a week.

On 5/19/22, TX released new data that is NOT included in cumulative case counts or figures but located here and in Appendix 3B of this report (1,184,990 cumulative child cases as of 5/19/22); TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754).

COVID-19: Available Data for Children

- State-level reports are the best publicly available data on COVID-19 cases in children
- Starting in June 2021, some states reported less frequently and dropped metrics previously reported as overall cases decreased
- This report summarizes what was available on 6/2/22
- **49 states, NYC, DC, Puerto Rico and Guam** provided age distributions of reported COVID-19 cases
 - 25 states and NYC provided age distribution of hospitalizations
 - 46 states, NYC, PR and Guam provided age distribution of deaths

Fig 1A: States Reporting Age Distribution of COVID-19 Cases as of 6/2/22

Reporting age distribution of COVID-19 cases:

- Yes: Reported age distribution of cases
- TX: Reported age distribution for only 2% of cases; Cases through 8/26/21
- NY: Only NYC reported age distribution of cases
- MA: Only reported age distribution of cases added in past 2 weeks
- AL: Cases through 7/29/21 HI: Cases through 1/13/22
- DC: Cases through 3/3/22 MS: Cases through 3/10/22
- SC: Cases through 4/28/22 NE: Cases through 5/12/22

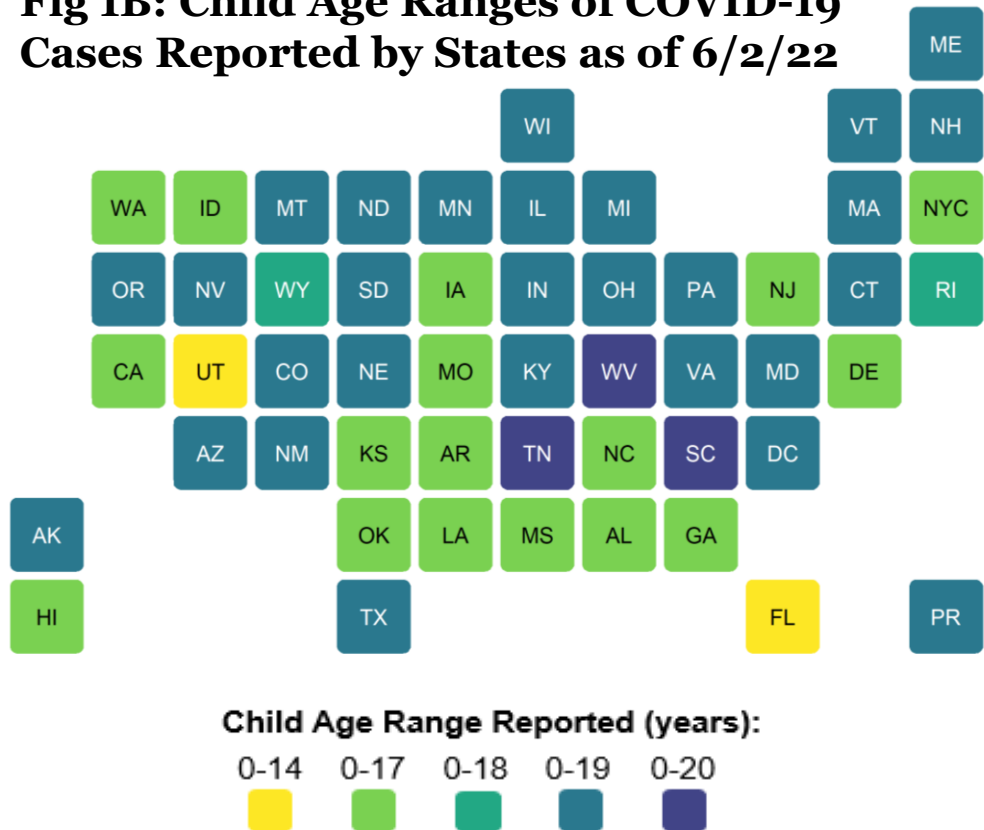

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU
 Analysis by American Academy of Pediatrics and Children's Hospital Association
 All data reported by state/local health departments are preliminary and subject to change

Children and COVID-19: Data Limitations

General Limitations

- Format, content, and metrics of reported COVID-19 data differed substantially by state
- Definition of “child”: Age ranges reported for children varied by state (0-14, 0-17, 0-18, 0-19, and 0-20 years; see Fig 1B)
- Unknown: Number of children infected but not tested and confirmed

Fig 1B: Child Age Ranges of COVID-19 Cases Reported by States as of 6/2/22

State-Level Changes

- TX: Age distribution reported for only 2% of confirmed cases (99,989/5,635,951) resulting in an undercount of child cases; TX cumulative cases through 8/26/21. As of 5/19/22, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report
- NY: Did not provide age distribution for state-wide cases (NYC only)
- AL: As of 8/13/20, changed definition of child case from 0-24 to 0-17 years; as of 9/17/20, provided age distribution for confirmed cases only; as of 8/5/21, due to change in data available, AL cumulative cases and deaths through 7/29/21
- HI: As of 8/27/20, changed definition of child case from 0-19 to 0-17 years; As of 1/20/22, due to change in available data, HI cumulative cases, hospitalizations, and deaths through 1/13/22
- MA: As of 9/3/20, revised definition of probable case, leading to a reduction in total case count, and changed reporting from total child cases to cases added in last two weeks
- RI: As of 9/10/20, changed definition of child case from 0-19 to 0-18 years
- MO: As of 10/1/20, changed definition of child cases from 0-19 to 0-17 years; As of 4/7/22, due to change in available data, MO cumulative deaths through 3/31/22
- PR: As of 3/11/21, due to a change in data available, a calculation was required to obtain confirmed and probable child case totals, leading to a reduction in total child case count
- AK: On 6/17/21, did not report child hospitalizations or child deaths
- FL: As of 6/24/21, stopped reporting child hospitalizations; due to change in data available, calculation required to obtain child cases for 0-14 years; As of 3/17/22, available case and death data updated every other week
- LA: As of 8/5/21, changed reporting total cases and deaths from confirmed to confirmed and probable (combined)
- WV: As of 8/12/21, WV changed definition of child case from 0-19 to 0-20 years
- WA: As of 1/13/22, due to a change in data available, WA cumulative hospitalizations and deaths through 1/6/22; As of 3/10/22, changed definition of child case from 0-19 to 0-17
- IA: As of 2/17/22, due to a change in available data, IA cumulative deaths through 2/10/22
- DC: As of 3/10/22, due to change in available data, DC cumulative cases and deaths through 3/3/22
- MS: As of 3/17/22, due to change in available data, MS cumulative cases, hospitalizations, and deaths through 3/10/22
- KS: As of 4/14/22, due to change in available data, KS cumulative hospitalizations through 4/7/22
- CO: As of 4/28/22, due to change in available data, CO cumulative hospitalizations through 4/21/22
- SC: As of 5/5/22, due to change in available data, SC cumulative cases, hospitalizations, and deaths through 4/28/22
- VT: As of 5/19/22, due to change in available data, VT cumulative deaths through 5/12/22
- NE: As of 5/19/22, due to change in available data, NE cumulative cases, hospitalizations, and deaths through 5/12/22

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU; Analysis by American Academy of Pediatrics and Children's Hospital Association; All data reported by state/local health departments are preliminary and subject to change

Children and COVID-19: 6/2/22

Summary of State-Level Data Provided in this Report*

Detail and links to state/local data sources provided in Appendix

Cumulative Number of Child COVID-19 Cases*

- 13,453,509 total child COVID-19 cases reported, and children represented 18.9% (13,453,509/71,097,215) of all cases
- Overall rate: 17,874 cases per 100,000 children in the population

Change in Child COVID-19 Cases*

- 87,374 child COVID-19 cases were reported the past week from 5/26/22-6/2/22 (13,366,135 to 13,453,509) and children represented 16.3% (87,374/535,151) of the weekly reported cases
- Over two weeks, 5/19/22-6/2/22, there was a 2% increase in the cumulated number of child COVID-19 cases (199,870 cases added (13,253,639 to 13,453,509))

Cumulative Hospitalizations (25 states and NYC reported)*

- Among states reporting, children ranged from 1.3%-4.6% of their total cumulated hospitalizations, and 0.1%-1.5% of all their child COVID-19 cases resulted in hospitalization

Cumulative Mortality (46 states, NYC, PR and GU reported)*

- Among states reporting, children were 0.00%-0.32% of all COVID-19 deaths, and 3 states reported zero child deaths
- In states reporting, 0.00%-0.02% of all child COVID-19 cases resulted in death

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU; Analysis by American Academy of Pediatrics and Children's Hospital Association

* Note: Data Limitations. The numbers in this report represent cumulative counts since states began reporting. The data are based on how public agencies collect, categorize and post information. All data reported by state/local health departments are preliminary and subject to change and reporting may change over time. Notably, in the summer of 2021 and winter of 2022, some states have revised cases counts previously reported, begun reporting less frequently, or dropped metrics previously reported. For example, due to several changes on their dashboards and the data currently available, AL, TX, HI, DC, MS, SC and NE data in this report are not current (cumulative data through 7/29/21, 8/26/21, 1/13/22, 3/3/22, 3/10/22, 4/28/22, and 5/12/22 respectively). Additionally, as of 3/17/22, available FL case and death data updated only every other week. Readers should consider these factors. States may have additional information on their web sites.

Changes in testing and how states report might affect week to week comparisons. The extremely high volume of cases during the Omicron surge followed by the sharp decline in cases may have created discontinuities in state reports week to week. Shortages of COVID-19 tests during surges and the increasing use of COVID-19 home tests likely affect the undercounting of COVID-19 cases. During holiday weeks states may change their reporting schedules which may cause irregularities in trends. At times when COVID-19 transmission is low, states might reduce the frequency information is updated. Beginning in March 2022 several states shifted to updating data one to two times a week.

On 5/19/22, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report (1,184,990 cumulative child cases as of 5/19/22); TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754).

Fig 2. Cumulative Number of Child COVID-19 Cases: 6/2/22

- 13,453,509 total child COVID-19 cases (cumulative)
- Nine states reported 400,000+ child cases
- Three states reported fewer than 30,000 child cases

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)
 All data reported by state/local health departments are preliminary and subject to change
 Analysis by American Academy of Pediatrics and Children's Hospital Association
 For 6 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, and NE through 5/12/22.
 On 6/2/22, due to available data for FL, child cases and total cases through 5/26/22 (As of 3/17/22, available FL case data updated every other week)

Fig 3. Percent of Cumulative COVID-19 Cases that were Children: 6/2/22

- Children represented 18.9% (13,453,509/71,097,215) of all available cases
- Thirteen states reported 22% or more of cumulated cases were children

Overall percent children: 18.9%

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)
 All data reported by state/local health departments are preliminary and subject to change
 Analysis by American Academy of Pediatrics and Children's Hospital Association
 For 6 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, and NE through 5/12/22.
 On 6/2/22, due to available data for FL, child cases and total cases through 5/26/22 (As of 3/17/22, available FL case data updated every other week)

Fig 4. Cumulative COVID-19 Cases per 100,000 Children: 6/2/22

- Calculated using state-level population estimates from US Census Bureau (2019)*
- Overall rate: 17,874 child COVID-19 cases per 100,000 children in the population
- Thirteen states reported more than 24,000 cases per 100,000

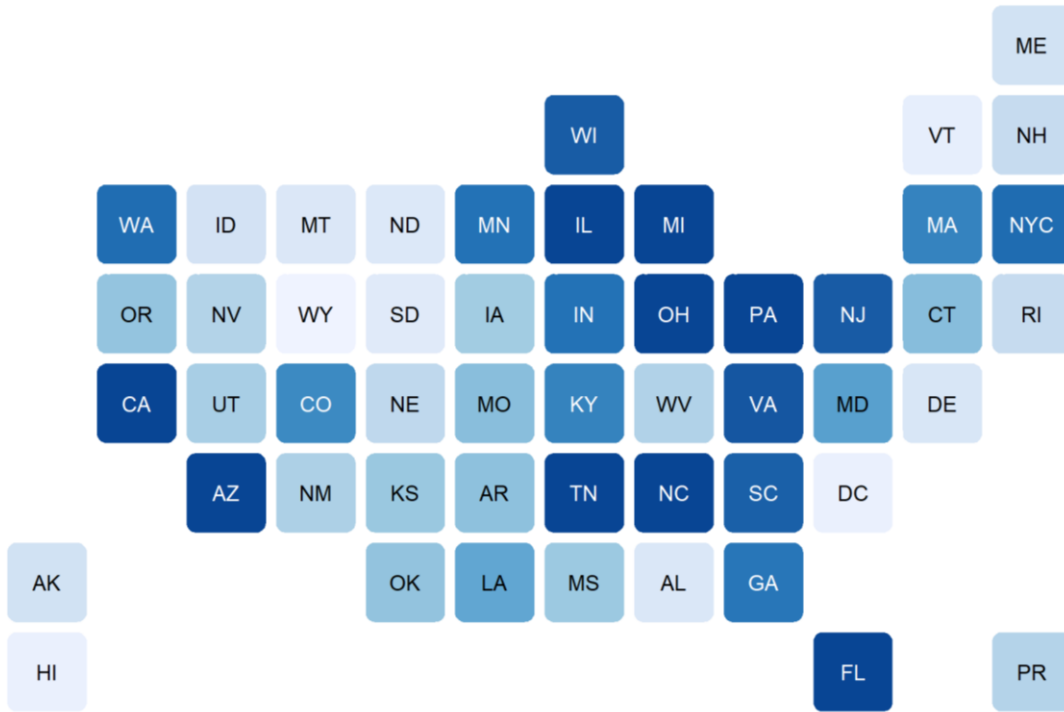

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)
 All data reported by state/local health departments are preliminary and subject to change
 Analysis by American Academy of Pediatrics and Children's Hospital Association
 For 6 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, and NE through 5/12/22.
 On 6/2/22, due to available data for FL, child cases and total cases through 5/26/22 (As of 3/17/22, available FL case data updated every other week)

Fig 5. Cumulative Child COVID-19 Cases and Percent Increase in Child Cases

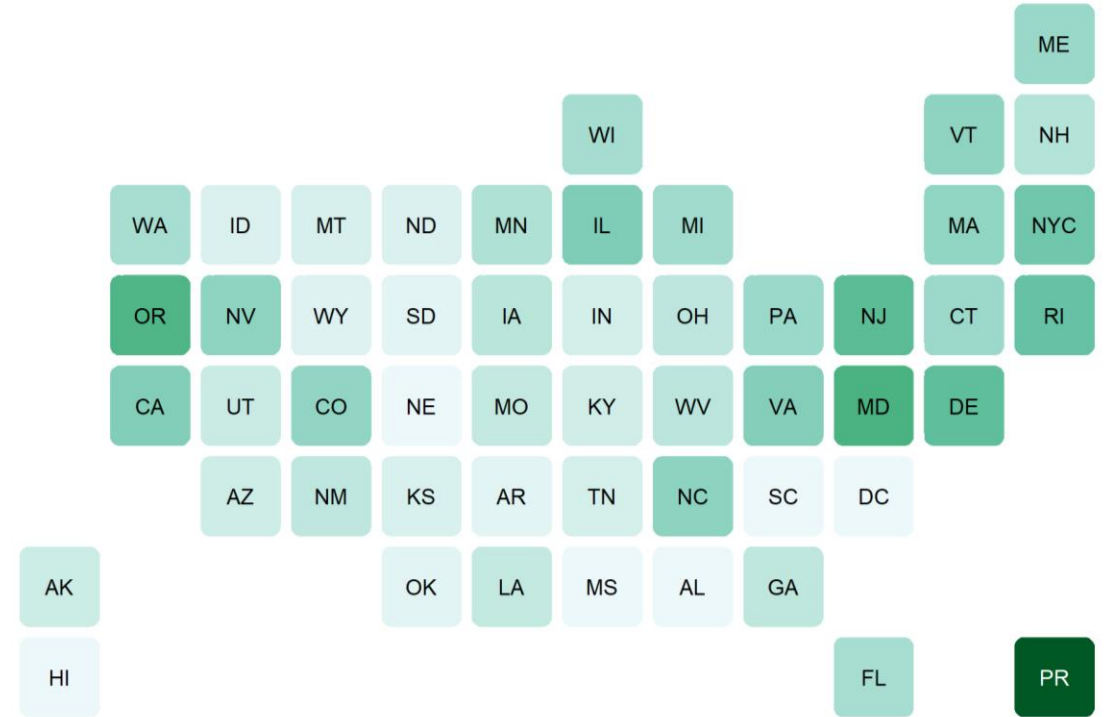

A. Cumulative Child COVID-19 Cases, 6/2/22

9 states with 400,000+ cumulative child cases

B. Percent Increase in Child Cases, 5/19/22-6/2/22

From 5/19-6/2, there were 199,870 child cases added (13,253,639 to 13,453,509; 2% increase)

Cumulative child COVID-19 cases (thousands) 100 200 300 400+

Percent increase 0 1 2 3 4 5+

See detail in Appendix: Data from 48 states, NYC, DC, and PR (TX excluded from figures)
 All data reported by state/local health departments are preliminary and subject to change; Analysis by American Academy of Pediatrics and Children's Hospital Association
 Due to available data and calculations required to obtain MA child cases, weekly estimates fluctuate
 For 6 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, and NE through 5/12/22
 On 6/2/22, due to available data for FL, child cases and total cases through 5/26/22 (As of 3/17/22, available FL case data updated every other week)

Fig 6. United States: Number of Child COVID-19 Cases Added in Past Week*

* Note: 6 states changed their definition of child cases: AL as of 8/13/20, HI as of 8/27/20, RI as of 9/10/20, MO as of 10/1/20, WV as of 8/12/21, WA as of 3/10/22
 On 5/19/22, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report (1,184,990 cumulative child cases as of 5/19/22); TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754)
 Due to available data and calculations required to obtain MA child cases, weekly estimates fluctuate
 For 6 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, and NE through 5/12/22
 On 6/2/22, due to available data for FL, child cases and total cases through 5/26/22 (As of 3/17/22, available FL case data updated every other week)
 See detail in Appendix: Data from 49 states, NYC, DC, PR and GU
 All data reported by state/local health departments are preliminary and subject to change; Analysis by American Academy of Pediatrics and Children's Hospital Association

Fig 7. United States: Child COVID-19 Cases Added in Past Week, by Region*

Week ending in

* Note: Regions are the US Census Regions

6 states changed their definition of child cases: AL as of 8/13/20, HI as of 8/27/20, RI as of 9/10/20, MO as of 10/1/20, WV as of 8/12/21, WA as of 3/10/22

On 5/19/22, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report (1,184,990 cumulative child cases as of 5/19/22);

TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754)

Due to available data and calculations required to obtain MA child cases, weekly estimates fluctuate

For 6 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, and NE through 5/12/22

On 6/2/22, due to available data for FL, child cases and total cases through 5/26/22 (As of 3/17/22, available FL case data updated every other week)

See detail in Appendix: Data from 49 states, NYC, DC, PR and GU

All data reported by state/local health departments are preliminary and subject to change; Analysis by American Academy of Pediatrics and Children's Hospital Association

Fig 8. United States: Number of COVID-19 Cases Added in Past Week for Children and Adults*

* Note: 6 states changed their definition of child cases: AL as of 8/13/20, HI as of 8/27/20, RI as of 9/10/20, MO as of 10/1/20, WV as of 8/12/21, WA as of 3/10/22

On 5/19/22, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report (1,184,990 cumulative child cases as of 5/19/22);

TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754)

Due to available data and calculations required to obtain MA child cases, weekly estimates fluctuate

For 6 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, and NE through 5/12/22

On 6/2/22, due to available data for FL, child cases and total cases through 5/26/22 (As of 3/17/22, available FL case data updated every other week)

See detail in Appendix: Data from 49 states, NYC, DC, PR and GU

All data reported by state/local health departments are preliminary and subject to change; Analysis by American Academy of Pediatrics and Children's Hospital Association

Appendix Table 1: Case Data Available on 6/2/22

Summary data across the 49 states, NYC, DC, PR, and GU that provided age distribution of reported COVID-19 cases*

Child population, 2019	Cumulative total cases (all ages)	Cumulative child cases	Cumulative percent children of total cases	Cases per 100,000 children
75,266,842	71,097,215	13,453,509	18.9%	17874.4

* Note: Data represent cumulative counts since states began reporting; All data reported by state/local health departments are preliminary and subject to change
 On 5/19/22, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report (1,184,990 cumulative child cases as of 5/19/22);
 TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754)
 For 6 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, and NE through 5/12/22
 On 6/2/22, due to available data for FL, child cases and total cases through 5/26/22 (As of 3/17/22, available FL case data updated every other week)

Appendix Table 2A: Summary of Child Case Data from 4/16/20 – 6/2/22*

Date	Number of locations reporting age	Cumulative total cases (all ages)	Cumulative child cases [^]	Percent children of total cases	Cases per 100,000 children
6/2/22	49 states, NYC, DC, PR and GU [^]	71,097,215	13,453,509	18.9%	17874.4

As of 7/30/20, Texas provided age distribution for all COVID-19-associated deaths; Texas reported age for only 2% of total confirmed cases; As of 1/14/21, TX released new data that is only updated monthly- TX cumulative deaths through 2/3/22;

Percent of child cases resulting in death omitted for Texas; Data for Texas in this report is limited to the case count for which age is provided

■ As of 5/19/22, due to available data and changes made to dashboard, VT cumulative child deaths and cumulative deaths for all ages through 5/12/22

♦ As of 1/13/22, due to available data and changes made to dashboard, WA cumulative child deaths and cumulative deaths for all ages through 1/6/22

Frequently Asked Questions

Q: *Why are the AAP and CHA collecting this data?*

A: Our goal is to provide a weekly snapshot of how COVID-19 is affecting children in the United States. CDC provides a national number of cases by age on its [COVID-19 data tracker](#), but there are no geographic indicators provided and the age data are not released on a regular schedule. Our data collection method allows for tracking the number of child cases weekly, as well as providing publicly reported case numbers for children at the state level.

Q: *The age ranges for children in the report are broad – why were these age ranges chosen and are data available for more specific age ranges of children?*

A: Each state makes different decisions about how to report the age distribution of COVID-19 cases, and as a result the age range for reported cases varies by state. For the purposes of this report it is not possible to standardize more detailed age ranges for children based on what is publicly available from the states at this time. Please refer to specific state health department websites of interest to see if the state provides more granular detail of cases by age (see report Appendix for links to all state data sources).

Q: *What is the definition of a COVID-19 case?*

A: COVID-19 cases are defined as persons who have been identified as a confirmed (via a diagnostic molecular test) or probable (via a clinical diagnosis) case. COVID-19 cases are reported by the states, [following reporting standards established by the CDC](#). For more information on the definitions of confirmed and probable cases, see the following resources: [COVID Tracking Project: Definitions](#); [CDC, COVID-19 Data and Surveillance](#).

Q: *Why are only a small portion (<5%) of child COVID-19 cases included for Texas?*

A: Texas Department of State Health Services reports overall confirmed cases but only a small fraction are included in the age distribution. As of 1/14/22 (last updated 4/19/22), TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report. Other sources for child COVID-19 cases can be found here: [Texas Public Schools COVID-19 Data](#)

Q: *Why does the report not provide the percent of child cases that were symptomatic vs. asymptomatic or that had underlying conditions?*

A: For the report, we are limited to the data that states are making publicly available. At this time, states are not providing data related to symptoms or underlying conditions and age. CDC provides some information on COVID-19 hospitalizations by age on the [CDC COVID-NET dashboard](#).

Q: *For the child population for each state, does that match the listed age range for the state's child COVID-19 data?*

A: Yes, the report uses child population numbers that match on directly with the listed age range for children provided by each state. State population numbers were obtained from the [US Census Bureau](#).

Q: *The report provides “cumulative totals” for cases, tests, hospitalizations, and deaths for available states. Are those the total numbers since the states began reporting, or since the AAP and CHA started collecting this data?*

A: All “cumulative total” data represent cumulative counts since states began reporting COVID-19 data.

Q: *How can I learn more about COVID-19 cases in my state?*

A: Links to all state data sources are provided in the Appendix.

Q: *Are these data final?*

A: No. All data reported by state/local health departments included in this report are preliminary and subject to change and revision as health departments gather more information.

Q: *Is this the most recent report available? When will a new report be released?*

A: The most recent version of the report is available for [download on the AAP website](#). New reports are made available on a weekly basis at [aap.org/CovidStateData](#).

Additional Resources

- For more information about COVID-19 data in your area, we encourage you to reach out to your state and local health department officials
- Visit the [AAP Critical Updates](#) site for daily updates, resources, and guidance on COVID-19 and pediatrics
- For COVID-19 articles for parents in English and Spanish, visit [HealthyChildren.org](#), the parenting website of the AAP
