

Children and COVID-19: State Data Report

A joint report from the American Academy of Pediatrics and the Children's Hospital Association
Summary of publicly reported data from 49 states, NYC, DC, PR, and GU

Version: 9/15/22

Note: Data Limitations. The numbers in this report represent cumulative counts since states began reporting. The data are based on how public agencies collect, categorize and post information. All data reported by state/local health departments are preliminary and subject to change and reporting may change over time. Notably, in the summer of 2021 and winter of 2022, some states have revised cases counts previously reported, begun reporting less frequently, or dropped metrics previously reported. For example, due to several changes on their dashboards and the data currently available, AL, TX, HI, DC, MS, SC, NE, and MN data in this report are not current (cumulative data through 7/29/21, 8/26/21, 1/13/22, 3/3/22, 3/10/22, 4/28/22, 5/12/22, and 6/30/22 respectively). Additionally, as of 3/17/22, FL published case and death data available every other week. Readers should consider these factors. States may have additional information on their web sites.

Changes in testing and how states report might affect week to week comparisons. The extremely high volume of cases during the Omicron surge followed by the sharp decline in cases may have created discontinuities in state reports week to week. Shortages of COVID-19 tests during surges and the increasing use of COVID-19 home tests likely affect the undercounting of COVID-19 cases. During holiday weeks states may change their reporting schedules which may cause irregularities in trends. At times when COVID-19 transmission is low, states might reduce the frequency information is updated. Beginning in March 2022, several states shifted to updating data one to two times a week. For children, the periods when school is not in session might reduce the volume of testing and reporting.

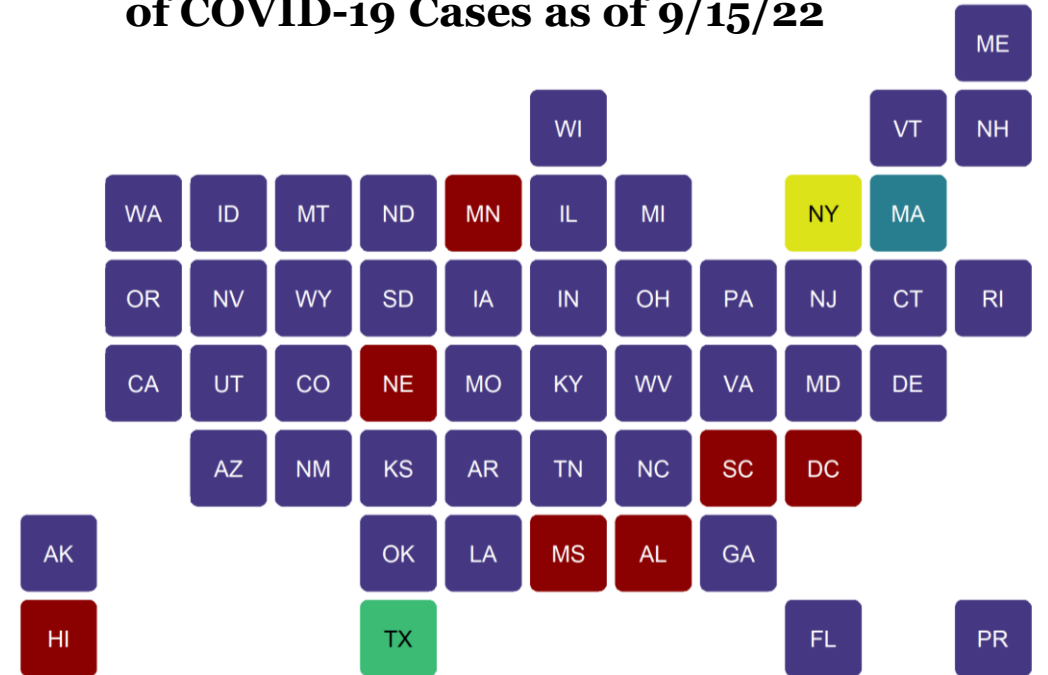

On 7/15/22, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report (1,250,637 cumulative child cases as of 7/15/22); TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754).

As of 6/16/22, due to only a portion of states reporting hospitalizations and deaths, we are no longer providing updates on cumulative hospitalizations and mortality data. The CDC now provides information that includes all of the US: For information regarding US child hospitalizations from the CDC, visit <https://covid.cdc.gov/covid-data-tracker/#new-hospital-admissions>. For information pertaining to US child mortality from the CDC, visit <https://covid.cdc.gov/covid-data-tracker/#demographics>.

COVID-19: Available Data for Children

- State-level reports are the best publicly available data on COVID-19 cases in children
- Starting in June 2021, some states reported less frequently and dropped metrics previously reported as overall cases decreased
- This report summarizes what was available on 9/15/22
- **49 states, NYC, DC, Puerto Rico and Guam** provided age distributions of reported COVID-19 cases

Fig 1A: States Reporting Age Distribution of COVID-19 Cases as of 9/15/22

Reporting age distribution of COVID-19 cases:

- Yes: Reported age distribution of cases
- TX: Reported age distribution for only 2% of cases; Cases through 8/26/21
- NY: Only NYC reported age distribution of cases
- MA: Only reported age distribution of cases added in past 2 weeks
- AL: Cases through 7/29/21 HI: Cases through 1/13/22
- DC: Cases through 3/3/22 MS: Cases through 3/10/22
- SC: Cases through 4/28/22 NE: Cases through 5/12/22
- MN: Cases through 6/30/22

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU
 Analysis by American Academy of Pediatrics and Children's Hospital Association
 All data reported by state/local health departments are preliminary and subject to change

Children and COVID-19: Data Limitations

General Limitations

- Format, content, and metrics of reported COVID-19 data differed substantially by state
- Definition of “child”: Age ranges reported for children varied by state (0-14, 0-17, 0-18, 0-19, and 0-20 years; see Fig 1B)
- Unknown: Number of children infected but not tested and confirmed

Fig 1B: Child Age Ranges of COVID-19 Cases Reported by States as of 9/15/22

State-Level Changes

- TX: Age distribution reported for only 2% of confirmed cases (99,989/6,317,273) resulting in an undercount of child cases; TX cumulative cases through 8/26/21. As of 7/15/22, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report
- NY: Did not provide age distribution for state-wide cases (NYC only)
- AL: As of 8/13/20, changed definition of child case from 0-24 to 0-17 years; as of 9/17/20, provided age distribution for confirmed cases only; as of 8/5/21, due to change in data available, AL cumulative cases 7/29/21
- HI: As of 8/27/20, changed definition of child case from 0-19 to 0-17 years; As of 1/20/22, due to change in available data, HI cumulative cases through 1/13/22
- MA: As of 9/3/20, revised definition of probable case, leading to a reduction in total case count, and changed reporting from total child cases to cases added in last two weeks
- RI: As of 9/10/20, changed definition of child case from 0-19 to 0-18 years
- MO: As of 10/1/20, changed definition of child cases from 0-19 to 0-17 years
- PR: As of 3/11/21, due to a change in data available, a calculation was required to obtain confirmed and probable child case totals, leading to a reduction in total child case count
- FL: As of 6/24/21, due to change in data available, calculation required to obtain child cases for 0-14 years; As of 3/17/22, available case data updated every other week
- LA: As of 8/5/21, changed reporting total cases from confirmed to confirmed and probable (combined)
- WV: As of 8/12/21, WV changed definition of child case from 0-19 to 0-20 years
- WA: As of 3/10/22, changed definition of child case from 0-19 to 0-17
- DC: As of 3/10/22, due to change in available data, DC cumulative cases through 3/3/22
- MS: As of 3/17/22, due to change in available data, MS cumulative cases through 3/10/22
- SC: As of 5/5/22, due to change in available data, SC cumulative cases through 4/28/22
- NE: As of 5/19/22, due to change in available data, NE cumulative cases through 5/12/22
- MN: As of 7/7/22, due to change in available data, MN cumulative cases through 6/30/22

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU; Analysis by American Academy of Pediatrics and Children’s Hospital Association; All data reported by state/local health departments are preliminary and subject to change

Children and COVID-19: 9/15/22

Summary of State-Level Data Provided in this Report*

Detail and links to state/local data sources provided in Appendix

Cumulative Number of Child COVID-19 Cases*

- 14,682,832 total child COVID-19 cases reported, and children represented 18.4% (14,682,832/79,703,828) of all cases
- Overall rate: 19,508 cases per 100,000 children in the population

Change in Child COVID-19 Cases*

- 60,299 child COVID-19 cases were reported the past week from 9/8/22-9/15/22 (14,622,533 to 14,682,832) and children represented 18.5% (60,299/325,243) of the weekly reported cases
- Over two weeks, 9/1/22-9/15/22, there was a 1% increase in the cumulated number of child COVID-19 cases since the beginning of the pandemic (143,571 cases added (14,539,261 to 14,682,832))

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU; Analysis by American Academy of Pediatrics and Children's Hospital Association

* Note: Data Limitations. The numbers in this report represent cumulative counts since states began reporting. The data are based on how public agencies collect, categorize and post information. All data reported by state/local health departments are preliminary and subject to change and reporting may change over time. Notably, in the summer of 2021 and winter of 2022, some states have revised cases counts previously reported, begun reporting less frequently, or dropped metrics previously reported. For example, due to several changes on their dashboards and the data currently available, AL, TX, HI, DC, MS, SC, NE, and MN data in this report are not current (cumulative data through 7/29/21, 8/26/21, 1/13/22, 3/3/22, 3/10/22, 4/28/22, 5/12/22, and 6/30/22 respectively). Additionally, as of 3/17/22, FL published case and death data available every other week. Readers should consider these factors. States may have additional information on their web sites.

Changes in testing and how states report might affect week to week comparisons. The extremely high volume of cases during the Omicron surge followed by the sharp decline in cases may have created discontinuities in state reports week to week. Shortages of COVID-19 tests during surges and the increasing use of COVID-19 home tests likely affect the undercounting of COVID-19 cases. During holiday weeks states may change their reporting schedules which may cause irregularities in trends. At times when COVID-19 transmission is low, states might reduce the frequency information is updated. Beginning in March 2022 several states shifted to updating data one to two times a week. For children, the periods when school is not in session might reduce the volume of testing and reporting.

On 7/15/22, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report (1,250,637 cumulative child cases as of 7/15/22); TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754).

As of 6/16/22, due to only a portion of states reporting hospitalizations and deaths, we are no longer providing updates on cumulative hospitalizations and mortality data. The CDC now provides information that includes all of the US: For information regarding US child hospitalizations from the CDC, visit <https://covid.cdc.gov/covid-data-tracker/#new-hospital-admissions>. For information pertaining to US child mortality from the CDC, visit <https://covid.cdc.gov/covid-data-tracker/#demographics>.

Fig 2. Cumulative Number of Child COVID-19 Cases: 9/15/22

- 14,682,832 total child COVID-19 cases (cumulative)
- Among states reporting:
 - Eight states reported 500,000+ child cases
 - Three states reported fewer than 50,000 child cases

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)
 All data reported by state/local health departments are preliminary and subject to change
 Analysis by American Academy of Pediatrics and Children's Hospital Association
 For 7 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, NE through 5/12/22, and MN through 6/30/22. These 7 states, TX, and GU are not included in the figure.
 As of 6/9/22, due to available data for FL (case data updated every other week), child and total cases averaged across 2 week period accordingly
 On 9/15/22, due to lag in reporting and available data, CA cumulative child cases and total cases include only 3 days of data since 9/8/22 report
 On 9/15/22, due to available data, NV cumulative child cases and total cases through 9/8/22
 On 9/15/22, due to available data, VA cumulative child cases and total cases through 9/8/22

Fig 3. Percent of Cumulative COVID-19 Cases that were Children: 9/15/22

- Children represented 18.4% (14,682,832/79,703,828) of all available cases
- Among states reporting:
 - Nine states reported 22% or more of cumulated cases were children

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)
 All data reported by state/local health departments are preliminary and subject to change
 Analysis by American Academy of Pediatrics and Children's Hospital Association
 For 7 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, NE through 5/12/22, and MN through 6/30/22. These 7 states, TX, and GU are not included in the figure.
 As of 6/9/22, due to available data for FL (case data updated every other week), child and total cases averaged across 2 week period accordingly
 On 9/15/22, due to lag in reporting and available data, CA cumulative child cases and total cases include only 3 days of data since 9/8/22 report
 On 9/15/22, due to available data, NV cumulative child cases and total cases through 9/8/22
 On 9/15/22, due to available data, VA cumulative child cases and total cases through 9/8/22

Fig 4. Cumulative COVID-19 Cases per 100,000 Children: 9/15/22

- Calculated using state-level population estimates from US Census Bureau (2019)*
- Overall rate: 19,508 child COVID-19 cases per 100,000 children in the population
- Among states reporting:
 - Eleven states reported more than 26,000 cases per 100,000

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)
 All data reported by state/local health departments are preliminary and subject to change
 Analysis by American Academy of Pediatrics and Children's Hospital Association
 For 7 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, NE through 5/12/22, and MN through 6/30/22. These 7 states, TX, and GU are not included in the figure.
 As of 6/9/22, due to available data for FL (case data updated every other week), child and total cases averaged across 2 week period accordingly
 On 9/15/22, due to lag in reporting and available data, CA cumulative child cases and total cases include only 3 days of data since 9/8/22 report
 On 9/15/22, due to available data, NV cumulative child cases and total cases through 9/8/22
 On 9/15/22, due to available data, VA cumulative child cases and total cases through 9/8/22

* Source: US Census Bureau, State Population by Characteristics: 2010-2019, <https://www.census.gov/data/tables/time-series/demo/popest/2010s-state-detail.html>

Fig 5. Cumulative Child COVID-19 Cases and Percent Increase in Child Cases

A. Cumulative Child COVID-19 Cases, 9/15/22

8 states with 500,000+ cumulative child cases

B. Percent Increase in Child Cases, 9/1/22-9/15/22

From 9/1-9/15, there were 143,571 child cases added (14,539,261 to 14,682,832; 1% increase)

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)

All data reported by state/local health departments are preliminary and subject to change

Analysis by American Academy of Pediatrics and Children's Hospital Association

For 7 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, NE through 5/12/22, and MN through 6/30/22. These 7 states, TX, and GU are not included in the figure.

As of 6/9/22, due to available data for FL (case data updated every other week), child and total cases averaged across 2 week period accordingly

Due to available data and calculations required to obtain MA child cases, weekly estimates fluctuate (eg, on 9/8/22, due to available data, MA cumulative child cases and total cases through 9/1/22)

On 9/15/22, due to lag in reporting and available data, CA cumulative child cases and total cases include only 3 days of data since 9/8/22 report

On 9/15/22, due to available data, NV cumulative child cases and total cases through 9/8/22

On 9/15/22, due to available data, VA cumulative child cases and total cases through 9/8/22

Fig 6. United States: Number of Child COVID-19 Cases Added in Past Week*

* Note: 6 states changed their definition of child cases: AL as of 8/13/20, HI as of 8/27/20, RI as of 9/10/20, MO as of 10/1/20, WV as of 8/12/21, WA as of 3/10/22
 On 7/15/22, TX released new data that is NOT included in cumulative case counts or figures but located here and in Appendix 3B of this report (1,250,637 cumulative child cases as of 7/15/22);
 TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754)
 Due to available data and calculations required to obtain MA child cases, weekly estimates fluctuate (eg, on 9/8/22, due to available data, MA cumulative child cases and total cases through 9/1/22)
 For 7 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, NE through 5/12/22, and MN through 6/30/22
 As of 6/9/22, due to available data for FL (case data updated every other week), child and total cases averaged across 2 week period accordingly
 On 9/15/22, due to lag in reporting and available data, CA cumulative child cases and total cases include only 3 days of data since 9/8/22 report
 On 9/15/22, due to available data, NV cumulative child cases and total cases through 9/8/22
 On 9/15/22, due to available data, VA cumulative child cases and total cases through 9/8/22
 See detail in Appendix: Data from 49 states, NYC, DC, PR and GU
 All data reported by state/local health departments are preliminary and subject to change; Analysis by American Academy of Pediatrics and Children's Hospital Association

Fig 7. United States: Child COVID-19 Cases Added in Past Week, by Region* 4/23/20 to 9/15/22

* Note: Regions are the US Census Regions
 On 7/15/22, TX released new data that is NOT included in cumulative case counts or figures but located here and in Appendix 3B of this report (1,250,637 cumulative child cases as of 7/15/22); TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754)
 Due to available data and calculations required to obtain MA child cases, weekly estimates fluctuate (eg, on 9/8/22, due to available data, MA cumulative child cases and total cases through 9/1/22)
 For 7 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22, SC through 4/28/22, NE through 5/12/22, and MN through 6/30/22
 As of 6/9/22, due to available data for FL (case data updated every other week), child and total cases averaged across 2 week period accordingly
 On 9/15/22, due to lag in reporting and available data, CA cumulative child cases and total cases include only 3 days of data since 9/8/22 report
 On 9/15/22, due to available data, NV cumulative child cases and total cases through 9/8/22
 On 9/15/22, due to available data, VA cumulative child cases and total cases through 9/8/22
 See detail in Appendix: Data from 49 states, NYC, DC, PR and GU
 All data reported by state/local health departments are preliminary and subject to change; Analysis by American Academy of Pediatrics and Children's Hospital Association

Appendix Table 1: Case Data Available on 9/15/22

Summary data across the 49 states, NYC, DC, PR, and GU that provided age distribution of reported COVID-19 cases*

Child population, 2019	Cumulative total cases (all ages)	Cumulative child cases	Cumulative percent children of total cases	Cases per 100,000 children
75,266,842	79,703,828	14,682,832	18.4%	19507.7

* Note: Data represent cumulative counts since states began reporting; All data reported by state/local health departments are preliminary and subject to change
 On 7/15/22, TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report ((1,250,637 cumulative child cases as of 7/15/22);
 TX previously reported age for only a small proportion of total cases each week (eg, 2-20%); these cumulative cases through 8/26/21 are included (7,754)
 For 7 states, due to available data and changes made to dashboards, cumulative child cases and total cases for all ages are not current: AL through 7/29/21, HI through 1/13/22, DC through 3/3/22, MS through 3/10/22,
 SC through 4/28/22, NE through 5/12/22, and MN through 6/30/22
 As of 6/9/22, due to available data for FL (case data updated every other week), child and total cases averaged across 2 week period accordingly
 On 9/15/22, due to lag in reporting and available data, CA cumulative child cases and total cases include only 3 days of data since 9/8/22 report
 On 9/15/22, due to available data, NV cumulative child cases and total cases through 9/8/22
 On 9/15/22, due to available data, VA cumulative child cases and total cases through 9/8/22

Appendix Table 2A: Summary of Child Case Data from 4/16/20 – 9/15/22*

Date	Number of locations reporting age	Cumulative total cases (all ages)	Cumulative child cases [^]	Percent children of total cases	Cases per 100,000 children
9/15/22	49 states, NYC, DC, PR and GU ^{‡ v >}	79,703,828	14,682,832	18.4%	19507.7
9/8/22	49 states, NYC, DC, PR and GU ^{# >}	79,378,585	14,622,533	18.4%	19427.6
9/1/22	49 states, NYC, DC, PR and GU ^{> □}	78,948,024	14,539,261	18.4%	19317.0
8/25/22	49 states, NYC, DC, PR and GU ^{>}	78,513,599	14,448,622	18.4%	19196.5
8/18/22	49 states, NYC, DC, PR and GU [#]	78,010,034	14,362,007	18.4%	19081.5
8/11/22	49 states, NYC, DC, PR and GU	77,488,876	14,282,482	18.4%	18975.8
8/4/22	49 states, NYC, DC, PR and GU	76,885,307	14,195,580	18.5%	18860.3
7/28/22	49 states, NYC, DC, PR and GU ^{± v > ▲}	76,163,222	14,098,981	18.5%	18732.0
7/21/22	49 states, NYC, DC, PR and GU ^{± v}	75,463,921	14,003,497	18.6%	18605.1
7/14/22	49 states, NYC, DC, PR and GU ^{+ ± □}	74,738,968	13,911,565	18.6%	18483.0
7/7/22	49 states, NYC, DC, PR and GU ^{# ± □ □}	74,094,409	13,836,132	18.7%	18382.8
6/30/22	49 states, NYC, DC, PR and GU ^{¥ ±}	74,493,180	13,768,212	18.7%	18292.5
6/23/22	49 states, NYC, DC, PR and GU ^{• ¥}	72,892,042	13,692,213	18.8%	18191.6
6/16/22	49 states, NYC, DC, PR and GU [¥]	72,342,343	13,624,605	18.8%	18101.7

* Note: Data represent cumulative counts since states began reporting; All data reported by state/local health departments are preliminary and subject to change

[^] Unknown: number of children infected but not tested and confirmed

[‡] On 9/15/22, due to lag in reporting and available data, CA cumulative child cases and total cases include only 3 days of data since 9/8/22 report

^v On 9/15/22, due to available data, NV cumulative child cases and total cases through 9/8/22; On 7/28/22, due to available data and calculations required to obtain NV data includes 7/21/22 and 7/28/22, resulting in an increase of 5,890 child cases and 35,698 total cases

[>] On 9/15/22, due to available data, VA cumulative child cases and total cases through 9/8/22; On 9/8/22, due to lag in reporting, VA experienced large increase in cumulative child cases and total cases (eg, 9,171 child cases added from 8/25/22 through 9/8/22);

On 9/1/22 & 8/25/22, due to available data, VA cumulative child cases and total cases through 8/18/22; On 7/28/22, due to available data, VA cumulative child cases and total cases through 7/21/22

[#] On 9/8/22, due to available data, MA cumulative child cases and total cases through 9/1/22; On 8/18/22, due to available data and calculations required, MA cases through 8/11/22; On 7/7/22, due to available data and calculations required, MA cases through 6/30/22

[□] On 9/1/22, due to available data, PA cumulative child cases and total cases through 8/25/22

[±] On 7/28/22, 7/21/22, 7/14/22, 7/7/22 & 6/30/22, due to available data, IA cumulative child cases and total cases through 6/23/22

On 7/21/22, due to available data, NV cumulative child cases and total cases through 7/14/22

[▲] On 7/28/22, due to available data, GU cumulative child cases and total cases through 7/21/22

⁺ On 7/14/22, due to available data, OR cumulative child cases and total cases through 7/7/22

[□] On 7/14/22 & 7/7/22, due to available data, NJ cumulative cases and total cases through 6/30/22

[□] As of 7/7/22, due to available data, MN cumulative cases and total cases through 6/30/22

■ As of 5/19/22, due to available data, NE cumulative child cases and total cases through 5/12/22

‡ On 9/15/22, due to available data, NV cumulative child cases and total cases through 9/8/22

« As of 5/5/22, due to available data, SC cumulative child cases and total cases through 4/28/22

^ Texas previously reported age for only 2% of total confirmed cases and these cumulative cases through 8/26/21 are included (7,754); Cases per 100,000 children omitted for Texas; Data for Texas in this report is limited to the case count for which age is provided through 8/26/21;

As of 1/14/22, TX released new data that is NOT included in cumulative case counts or figures but reported above in parentheses (eg, 1,250,637 cumulative child cases as of 7/15/22)

> On 9/15/22, due to available data, VA cumulative child cases and total cases through 9/8/22

Frequently Asked Questions

Q: *Why are the AAP and CHA collecting this data?*

A: Our goal is to provide a weekly snapshot of how COVID-19 is affecting children in the United States. CDC provides a national number of cases by age on its [COVID-19 data tracker](#), but there are no geographic indicators provided and the age data are not released on a regular schedule. Our data collection method allows for tracking the number of child cases weekly, as well as providing publicly reported case numbers for children at the state level.

Q: *The age ranges for children in the report are broad – why were these age ranges chosen and are data available for more specific age ranges of children?*

A: Each state makes different decisions about how to report the age distribution of COVID-19 cases, and as a result the age range for reported cases varies by state. For the purposes of this report it is not possible to standardize more detailed age ranges for children based on what is publicly available from the states at this time. Please refer to specific state health department websites of interest to see if the state provides more granular detail of cases by age (see report Appendix for links to all state data sources).

Q: *What is the definition of a COVID-19 case?*

A: COVID-19 cases are defined as persons who have been identified as a confirmed (via a diagnostic molecular test) or probable (via a clinical diagnosis) case. COVID-19 cases are reported by the states, [following reporting standards established by the CDC](#). For more information on the definitions of confirmed and probable cases, see the following resources: [COVID Tracking Project: Definitions](#); [CDC, COVID-19 Data and Surveillance](#).

Q: *Why are only a small portion (<5%) of child COVID-19 cases included for Texas?*

A: Texas Department of State Health Services reports overall confirmed cases but only a small fraction are included in the age distribution. As of 1/14/22 (last updated 7/15/22), TX released new data that is NOT included in cumulative case counts or figures but located [here](#) and in Appendix 3B of this report. Other sources for child COVID-19 cases can be found here: [Texas Public Schools COVID-19 Data](#)

Q: *Why does the report not provide the percent of child cases that were symptomatic vs. asymptomatic or that had underlying conditions?*

A: For the report, we are limited to the data that states are making publicly available. At this time, states are not providing data related to symptoms or underlying conditions and age. CDC provides some information on COVID-19 hospitalizations by age on the [CDC COVID-NET dashboard](#).

Q: *For the child population for each state, does that match the listed age range for the state's child COVID-19 data?*

A: Yes, the report uses child population numbers that match on directly with the listed age range for children provided by each state. State population numbers were obtained from the [US Census Bureau](#).

Q: *The report provides “cumulative totals” for cases in available states. Are those the total numbers since the states began reporting, or since the AAP and CHA started collecting this data?*

A: All “cumulative total” data represent cumulative counts since states began reporting COVID-19 data.

Q: *Why were hospitalization and mortality data removed from this report?*

A: As of 6/16/22, only a portion of states were continuing to report cumulative hospitalization and mortality data. The CDC now provides information that includes all of the US: For information regarding US child hospitalizations, visit <https://covid.cdc.gov/covid-data-tracker/#new-hospital-admissions>. For information pertaining to US child mortality, visit <https://covid.cdc.gov/covid-data-tracker/#demographics>.

Q: *How can I learn more about COVID-19 cases in my state?*

A: Links to all state data sources are provided in the Appendix.

Q: *Are these data final?*

A: No. All data reported by state/local health departments included in this report are preliminary and subject to change and revision as health departments gather more information.

Q: *Is this the most recent report available? When will a new report be released?*

A: The most recent version of the report is available for [download on the AAP website](#). New reports are made available on a weekly basis at aap.org/CovidStateData.

Additional Resources

- For more information about COVID-19 data in your area, we encourage you to reach out to your state and local health department officials
- Visit the [AAP Critical Updates](#) site for daily updates, resources, and guidance on COVID-19 and pediatrics
- For COVID-19 articles for parents in English and Spanish, visit [HealthyChildren.org](#), the parenting website of the AAP
