HUMAN PAPILLOMAVIRUS VACCINE

HPV IS MORE COMMON THAN YOU THINK

PRE-TEENS PRODUCE MORE ANTIBODIES AFTER HPV VACCINATION.

VACCINATING KIDS AT AGES 9–12 YEARS IS MOST EFFECTIVE

MORE ANTIBODIES EQUALS MORE PROTECTION.

HPV CAN CAUSE CANCERS IN THE:
- Base of tongue
- Throat
- Tonsils
- Reproductive system
- Anus

HPV VACCINE Protects against over 90% of the cancers caused by the virus.

Each year more than 46,000 people are diagnosed with HPV-related cancers.

HPV is more common than you think.

HPV can cause cancers in the:
- Throat
- Base of tongue
- Anus
- Reproductive system
- Tonsils

Over 46,000 people are diagnosed with HPV-related cancers each year more than you think.
