Nirsevimab Administration Visual Guide

Is it October 1 through March 31, or have regional experts or health authorities recommended nirsevimab administration currently?

- Yes
  - Is the patient < 8 months of age today?
    - Yes
      - Did the mother of this patient receive the RSV vaccine while pregnant?
        - Yes
          - Was the infant born within 14 days of maternal RSV vaccine administration?
            - Yes
              - Generally Not Recommended
            - No
              - Not Recommended
        - No or Unknown
          - Not Recommended
    - No
      - Not Recommended
  - No
    - Has the patient received a previous dose of nirsevimab in the current RSV season (e.g., in the newborn nursery)?
      - Yes
        - Has the patient received 1 or more doses of palivizumab in the current RSV season?
          - Yes
            - Nirsevimab 200 mg
          - No
            - Not Recommended
      - No
        - Has 30 days elapsed since the last dose?
          - Yes
            - Wait until 30 days elapse.
          - No
            - What is the patient’s current weight (today)?
              - < 5 kg
                - Nirsevimab 50 mg/0.5 mL
              - ≥ 5 kg
                - Nirsevimab 100 mg/mL

---

a. Children 8 through 19 months of age who are recommended to receive nirsevimab when entering their second RSV season because of increased risk of severe disease.
- Children with chronic lung disease of prematurity who required medical support (chronic corticosteroid therapy, diuretic therapy, or supplemental oxygen) any time during the 6-month period before the start of the second RSV season.
- Children who are severely immunocompromised.
- Children with cystic fibrosis who have manifestations of severe lung disease (previous hospitalization for pulmonary exacerbation in the first year of life or abnormalities on chest imaging that persist when stable) or have weight-for-length that is <10th percentile.
- American Indian and Alaska Native children (note that this is a new group for whom second-season prophylaxis is recommended in contrast to the current palivizumab recommendations).

b. Nirsevimab can be considered when, per the clinical judgement of the healthcare provider, the potential incremental benefit of administration is warranted, including but not limited to the following rare circumstances:
- Infants born to pregnant people who may not mount an adequate immune response to vaccination or have conditions associated with reduced transplacental antibody transfer.
- Infants who have undergone cardiopulmonary bypass or extracorporeal membrane oxygenation leading to loss of maternal antibodies.
- Infants with substantial increased risk for severe RSV disease (e.g., hemodynamically significant congenital heart disease, intensive care admission, and requiring oxygen at discharge).
At the time of administration, affirm the 7 rights to reduce errors:
1. Right patient
2. Right time (age, in RSV season)
3. Right immunization (correct medication)
4. The right dosage (based on weight)
5. The right route, needle length, and technique
6. Right site

Intramuscular (IM) injection
Use a 22–25 gauge needle. Choose the injection site and needle length that is appropriate to the person's age and body mass.

<table>
<thead>
<tr>
<th>Age</th>
<th>Needle length</th>
<th>Injection site</th>
</tr>
</thead>
<tbody>

<td>⅝”–1”</td>
<td>Deltoid muscle of arm</td>
</tr>
</tbody>
</table>

7. The right documentation

c. If skin is stretched tightly and subcutaneous tissues are not bunched.

d. Alternate needle lengths may be used if the skin is stretched tightly and subcutaneous tissues are not bunched, as follows: a) a ⅝” needle in toddlers, children, and patients weighing less than 130 lbs (less than 60 kg) for IM injection in the deltoid muscle only, or b) a 1” needle for administration in the thigh muscle for adults of any weight.

e. Preferred site

NOTE: Always refer to the package insert included with each biologic for complete vaccine administration information. CDC’s Advisory Committee on Immunization Practices (ACIP) recommendations for the particular vaccine should be reviewed as well. Access the ACIP recommendations at www.immunize.org/acip.
