Oral Health Coding Fact Sheet for Primary Care Physicians

**CPT Codes**: Current Procedural Terminology (CPT) codes are developed and maintained by the American Medical Association. The codes consist of 5 numbers (00100-99999). These codes are developed for physicians and other health care professionals to report medical procedures to insurance carriers for payment.

**CDT Codes**: Code on Dental Procedures and Nomenclature (CDT) codes are developed and maintained by the American Dental Association. These codes provide a way to accurately record and report dental treatment. The codes have a consistent format (letter D followed by 4 numbers) and are at the appropriate level of specificity to adequately encompass commonly accepted dental procedures. These needs are supported by the CDT codes. CDT codes are rarely, if ever, covered by commercial health insurance. CDT codes are included here because some commercial plans may cover, but more often State Medicaid plans may cover. Check with your payers and your fee schedule for more information.

---

**CPT Codes**

**Risk Assessment, Education, Prophylaxis, and Fluoride Varnish**

**99188 Application of topical fluoride varnish by a physician or other qualified health care professional**

- This code was approved to begin January 1, 2015. It only includes varnish application, not risk assessment, education, or referral to a dentist.
- The USPSTF recommended this for children up to 6 years of age. Therefore, code **99188** must be covered by commercial insurance by May 2015 for children up to age 6. Check with your insurers for specifics.
- The relative value unit (RVU) for CPT code **99188** (as of January 1, 2022) is as follows:
  - 0.35 Total Non-facility
  - 0.30 Total Facility
- The Section on Oral Health tracks payment for services.

**99401 Preventive medicine counseling and/or risk factor reduction intervention(s) provided to an individual (separate procedure); approximately 15 minutes**

**99429 Unlisted preventive medicine service**

**99499 Unlisted evaluation and management service**

**CDT Codes**

**D1206 Topical application of fluoride varnish**

“D” codes are covered under the Code on Dental Procedures and Nomenclature copyright by the American Dental Association.
D1208 Topical application of fluoride

D1354 Interim caries arresting medication application – conservative treatment of an active non-symptomatic carious lesion by topical application of a caries arresting or inhibiting medicament and without mechanical removal of sound tooth structure

Other Preventive Oral Health Services

D1310 Nutritional counseling for the control of dental disease

D1330 Oral hygiene instruction

Clinical Oral Evaluation

D0140 Limited oral evaluation, problem focused

D0145 Oral evaluation for patient under 3 years of age and counseling with primary caregiver

Oral Procedures

D7140 Extraction, erupted tooth or exposed root (elevation and/or forceps removal)

Alternate coding: CPT code 41899 Unlisted Procedure, dentoalveolar structures

While use of a more specific code (ie, D7140) is preferable to a nonspecific code (ie, 41899), reporting the CPT code may increase a pediatrician’s likelihood of getting paid. As an unlisted service, chart notes may need to accompany the claim.

Modifiers

For those carriers (particularly Medicaid plans under EPSDT), that cover oral health care, some will require a modifier (See “Private Payers and Medicaid” below)

SC Medically necessary service or supply

EP Services provided as part of Medicaid early periodic screening diagnosis and treatment program (EPSDT)

U5 Medicaid Level of Care 5, as defined by each state

Other (Referral Codes)

YD Dental Referral

- This referral code is used in the state of Pennsylvania for EPSDT services and may be used by other payers
ICD-10-CM Codes

Routine Encounter/Screening

Z00.121 Encounter for routine child health examination with abnormal findings (Use additional code to identify abnormal findings, such as dental caries)

Z00.129 Encounter for routine child health examination without abnormal findings

Z13.84 Encounter for screening for dental disorders

Z29.3 Encounter for prophylactic fluoride administration (fluoride varnish)

Risk

Z91.841 Risk for dental caries, low

Z91.842 Risk for dental caries, moderate

Z91.843 Risk for dental caries, high

Z91.849 Unspecified risk for dental caries

Other

E08.630 Diabetes Due to Underlying Condition with Periodontal Disease

E09.630 Drug/chem Diabetes Mellitus w/Periodontal Disease

E10.630 Type 1 Diabetes Mellitus with Periodontal Disease

E11.630 Type 2 Diabetes Mellitus with Periodontal Disease

K00.3 Mottled teeth

K00.81 Newborn Affected by Periodontal Disease in Mother

K02.3 Arrested dental caries

K02.51 Dental caries on pit and fissure surface limited to enamel

K02.52 Dental caries on pit and fissure surface penetrating into dentin

K02.53 Dental caries on pit and fissure surface penetrating into pulp

K02.61 Dental caries on smooth surface limited to enamel

K02.62 Dental caries on smooth surface penetrating into dentin

K02.63 Dental caries on smooth surface penetrating into pulp

K02.9 Dental caries, unspecified

K05.00 Acute gingivitis, plaque induced (Acute gingivitis NOS)

K05.01 Acute gingivitis, non-plaque induced
**K05.10** Chronic gingivitis, plaque induced (Gingivitis NOS)

**K05.11** Chronic gingivitis, non-plaque induced

**K05.5** Other Periodontal Diseases

**K05.6** Periodontal Disease, Unspecified

**K06.0** Gingival Recession

**K06.1** Gingival Enlargement

**K06.2** Gingival & Edentulous Alveolar Ridge Lesions Associated with Trauma

**K08.121** Complete Loss of Teeth Due to Periodontal Diseases, Class I

**K08.122** Complete Loss of Teeth Due to Periodontal Diseases, Class II

**K08.123** Complete Loss of Teeth Due to Periodontal Disease, Class III

**K08.124** Complete Loss of Teeth Due to Periodontal Diseases, Class IV

**K08.129** Complete Loss of Teeth Due to Periodontal Disease, Unspecified Class

**K08.421** Partial Loss of Teeth Due to Periodontal Diseases, Class I

**K08.422** Partial Loss of Teeth Due to Periodontal Diseases, Class II

**K08.423** Partial Loss of Teeth Due to Periodontal Diseases, Class III

**K08.424** Partial Loss of Teeth Due to Periodontal Diseases, Class IV

**K08.8** Other specified disorders of teeth and supporting structures

**R19.6** Halitosis

**S02.5XX-** Fracture of tooth (traumatic)

**S03.2XX-** Dislocation of tooth

- A 7th character is required for both S02 and S03 to show the encounter. 7th character “A” would show that the encounter is for initial or active treatment.
- Also include other codes that relate to the payer how the injury happened, including location and activity. Some states require the reporting of this information.

**Z71.89** Other specified counseling

**Z72.4** Inappropriate diet and eating habits

**Z92.89** Personal history of other medical treatment

**Private Payers and Medicaid**

The Affordable Care Act generally requires most health plans to provide coverage without cost-sharing for services that carry a current recommendation by the U.S. Preventive Services Task Force (USPSTF) with a
rating of A or B. Therefore, most private/commercial payers were required to pay for 99188 under the health or medical plans for children up to age 6 because the US Preventive Services Task Force recommended it as a Level B recommendation in May 2014. However, because the 2021 recommendations from USPSTF state they are for “children younger than 5 years,” some insurers may only pay up to age 5. They are not mandated to cover older children, even though fluoride varnish is helpful through the lifespan. The primary reasons why medical health plans do not cover the fluoride varnish, risk assessment, education, and referral to a dentist are that the health plan does not include dental services, or if there is limited coverage for certain dental services, the provider network is limited to dentists or oral surgeons. Since most carriers’ claims systems do not recognize the dental service codes (D codes) on their medical claims platforms, CPT code 99188 was developed in 2015.

Access the Medicaid reimbursement chart and which codes to use by state. However, please check with your individual state as their procedures change frequently without uniformity.

**FAQs**

**Q.** When was the new CPT code (99188) effective?

**A.** The CPT Editorial Panel approved the new CPT code 99188 for implementation on January 1, 2015.

**Q.** May I still bill the CDT code for topical fluoride application to my Medicaid plan or must I use the new CPT code?

**A.** If your Medicaid plan still requires and will pay on the CDT codes, you should continue to report the CDT codes as defined by your Medicaid plan. This will vary in each state.

**Q.** Our practice was happy to see the new CPT code; however, what does it mean “by a physician or other qualified health care professional”?

**A.** In order to obtain approval by the CPT Editorial Panel, we had to include this language as part of the code descriptor. Inclusion of this language does limit who may perform and report the service. The CPT definition “other qualified health care professionals” excludes clinical staff such as RNs and LPNs. Basically, an “other qualified health care professional” is one who can independently practice and bill under her own name. In practice, this means that CPT requires a physician or other qualified health care professional perform the topical fluoride application. While state scope of practice and Medicaid qualifications may allow clinical staff (eg, RN) to perform this service, CPT guidelines do not allow the reporting of code 99188 in those instances. However, if you are able to work with your payers and get it in writing that they will allow clinical staff to perform the service based on state scope of practice, and report incident to the supervising provider, then you would be able to use the code. Note that the CDT codes do not have this restriction. Also, there is a caveat in the “CPT Changes” manual that alludes to the application of topical fluoride varnish to those patients with “high risk” for dental caries.
Although code 99188 states application is done by physician or other qualified health care professional, payers may allow billing of services by trained clinical staff under direct physician supervision (incident to). Some Medicaid plans require training of clinical staff through specific programs. It is important to identify the requirements of individual payers prior to providing this service and get any variations from CPT in writing.

Q. Why was code 99188 not payable until recently? Also, what is the current relative value for 99188?

A. Originally CMS decided not to publish the recommended RVUs however, through Advocacy efforts by the AAP, CMS agreed to publish the recommended RVUs. The current relative value units are:

- 0.35 Total Non-facility
- 0.30 Total Facility

Q. What if a payer does not cover 99188?

A. As of now, the only payer the AAP is aware of that will not across the board cover fluoride varnish is Tricare. If you are billing a Medicaid plan, make sure you are reporting the correct code as it may be a CDT code and not the CPT code. See the AAP reference. Otherwise please contact the AAP Hassle Factor Form to inform the AAP of denials.

Q. If this new CPT code (99188) is to be used for “high risk caries” – how do you identify that? Is a formal screen required?

A. At this moment in time there is not a validated risk assessment tool for dental caries and the application for the CPT code was submitted prior to the publication of the new USPSTF guidelines so it contains information regarding risk. Even so, the state of “high risk” is at the discretion of the examining physician. The AAP does have a risk assessment that can be used as a guide, but ultimately it is deferred to the clinician's judgment and may be provided to all children under the age of six as a preventive service if that is the approach the clinician wishes to take. The USPSTF recommendations and more recent AAP policy certainly back this approach should someone need information to present to a payer.
