The American Academy of Pediatrics (AAP) and the American Foundation for Suicide Prevention (AFSP) have partnered to develop an ECHO program that focuses on clinical strategies described in the Blueprint for Youth Suicide Prevention. This program will provide evidence-based tools, resources, and support on how to implement suicide prevention protocols within your practice.

The two overarching program goals involve increases to participant:

- Knowledge and self-efficacy regarding best practices to identify and support youth at risk for suicide.
- Implementation of suicide prevention protocols into clinical practice.

To watch a video with more details about the program, click here.

Contact Jessie Leffelman, Program Manager ECHO Suicide Prevention Initiatives, at: jleffelman@aap.org

**OPPORTUNITY**

**TOPICS ADDRESSED**

- Addressing suicide prevention in pediatric practice
- Screening for youth suicide risk in practice
- Conducting a brief suicide safety assessment
- Providing appropriate care for youth at risk
- Brief interventions that can make a difference
- Resources and support
- Addressing common implementation barriers
- Preparing your practice for suicide prevention protocol

**BENEFITS FOR PARTICIPANTS**

- Increase knowledge and confidence of best practices related to identifying and supporting youth at risk for suicide.
- Learn strategies, resources, and approaches on how to implement best practices related to youth suicide prevention protocols.
- Network and problem solve in real time with leading suicide prevention experts and a quality improvement advisor.
- Connect regularly with a small cohort of your peers in a confidential and safe virtual meeting environment.
- Participating pediatricians will have the opportunity to earn American Board of Pediatrics Part 4 Maintenance of Certification credit, pending approval.

“I like that there was actual concrete suggestions as to how to implement suicide prevention in primary care.”
